Graphics Suite

Quick Start

New in 9.2

Focus On:

**Well Planning and
Presentation tools**

A Presentation solution

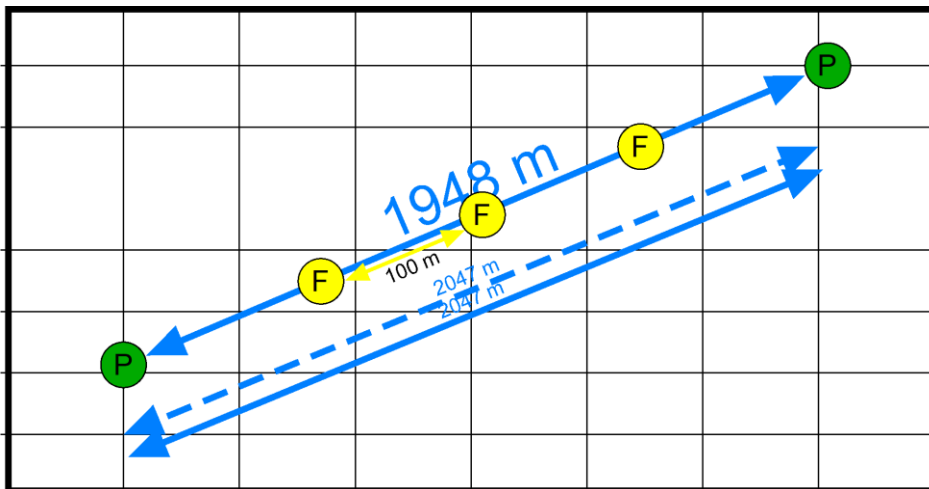

The EasyCopy Graphics suite, that provides high quality presentation tools, with support for the industry specific formats, unlimited file sizes and unlimited zoom, now also offers comprehensive measurement tools for well planning and other measurement requirements needed to be presented.

Well Planning

Unconventional Well Planning is a must for many companies and providing presentations with measurements of distances between multiple wells has become time saving and accurate with the new EasyCopy Map tools.

Map Measurements

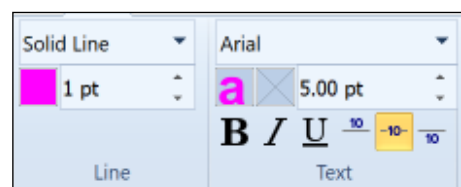

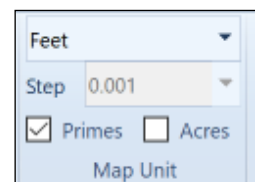

You can either start opening a map in EasyCopy or build up the well planning on an empty canvas.

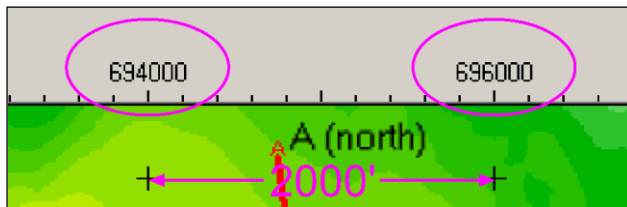

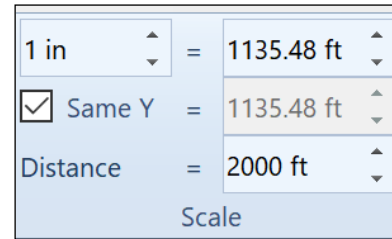

Well planning example on an empty canvas.

Map Measurement tools step by step

1. **Select the Unit** you like to use and the precision you need by selecting the Step you like to use for your measurements.
2. **Select the Line Color, Line Width and the Text Color and Text Size** suitable for your work.

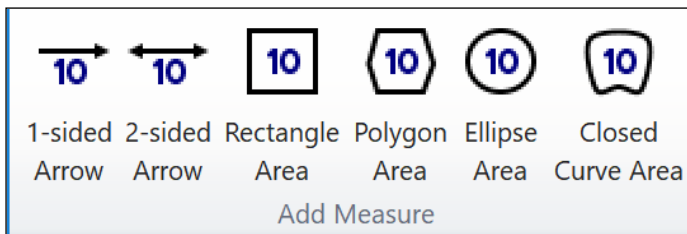

- If you do not have a scale you can **set the Scale** in the Scale group. You can either set the scale by entering values like 1 cm = 2 km, or by setting the Distance of an already drawn measure. The scale is default the same in x and y directions, but can be set independently if needed.

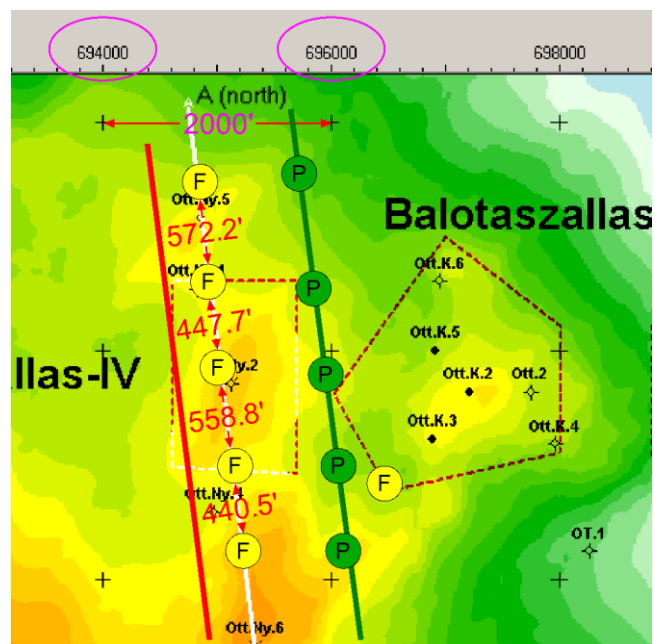

Example of setting the distance from an existing measurement

- Now the **Scale is set** and using the Map measurement tools will measure accordingly.
- You can place **Well Symbols**, that you have saved and stored in EasyCopy. (See how to create symbols in the EasyCopy Training Guide)

- Select the tool** you need from the Add Measure group
- Save your work** as a .lay or .layz file, so that you can continue your work at any time.

- Press F5 to **Present directly in EasyCopy** having the unlimited zoom available or
- Save as PDF or PPT** as you wish.

EasyCopy 9.2

Your feedback on the new Mapping tools is very important for us and therefore highly appreciated. Send an e-mail - write *easycopy* in the subject and mail to info@myeasycopy.com,
