EasyCopy 9.1 - Prepare and Present

EasyCopy 9.1 allows multi-page presentations to be prepared and presented in EasyCopy. If you are used to PowerPoint you will enjoy working with the **EasyCopy GeoPresenter** providing support for Seismic CGM, PDF, TIFF., strong scaling and unlimited zooming capabilities.

The EasyCopy Graphics Suite continues to fill the huge gap between the main GEO and CAD applications and the standard Windows applications typically used for publishing and presentation.

perigon **EasyCore and iPoint Integration**

We are very excited to announce that EasyCopy and Perigon have partnered to better serve our clients via improved and complete core workflow solutions.

From now on clients having EasyCore and the iPoint software will be able to take advantage of their projects being stored, opened directly, and presented within iPoint.

For users of both solutions integration of the two packages offers multiple advantages. EasyCore generated datasets are automatically added to the iPoint system and can be fully integrated with the other wellbore data types stored in the datastore.

Full visualization on multiple scales is possible and all data can be incorporated into iPoint's value adding workflows. For EasyCore customers, iPoint's advanced multiwell visualization provides a natural extension of the workflow.

For existing iPoint customers, EasyCore will dramatically alleviate the process of capturing and digitizing core descriptions and core data. Available on tablet or desktop, EasyCore's intuitive interface enables you to capture core descriptions; either from scratch in the core-lab, by analyzing core images or tracing hand-drawn core descriptions.

iPoint and EasyCore are two solutions that complement each other well and allow users the full benefit of capturing core data and integrating it into the visualization of wellbore data.
